

Draft Strategic Research Agenda

11 April 2019, Brussels

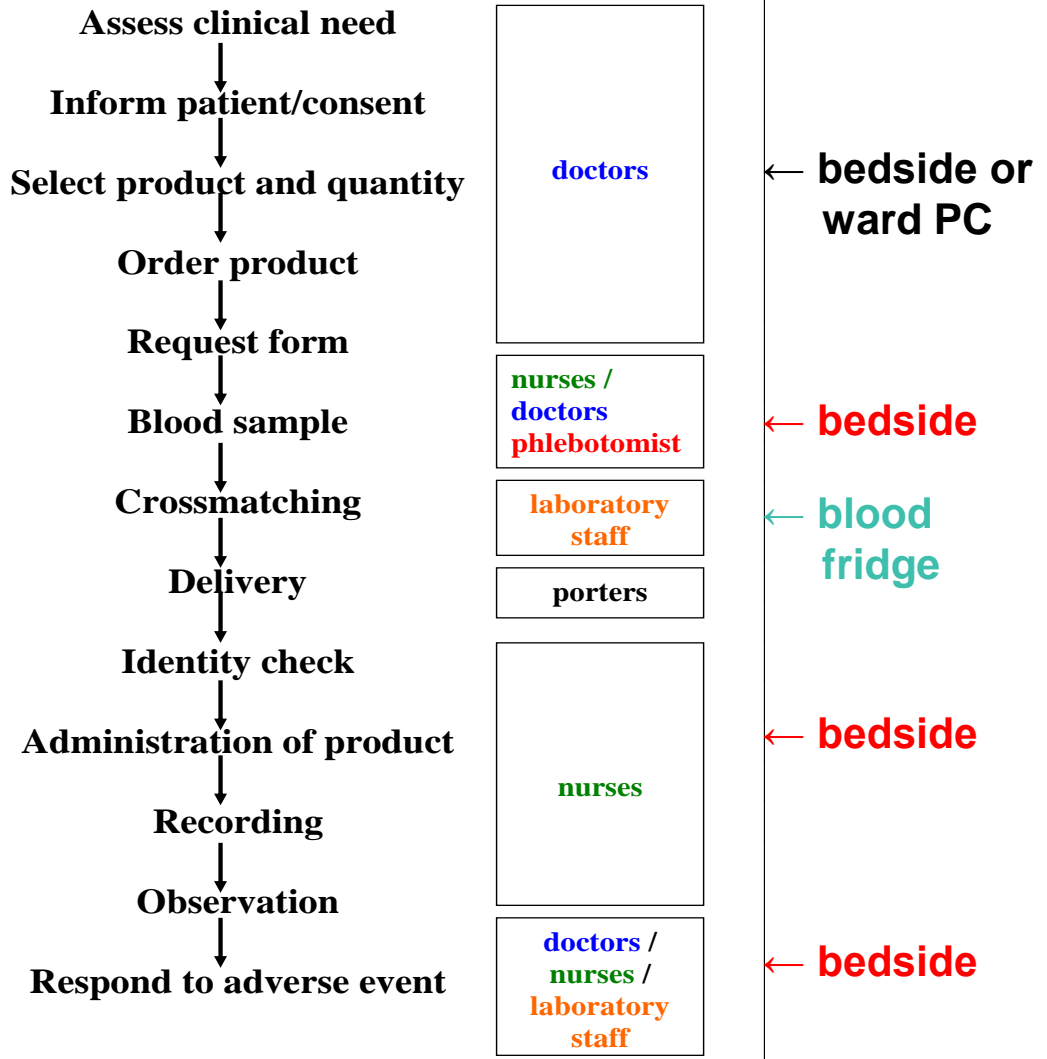

Overview

- Working towards a joint European research programme to support more effective and efficient health services in Europe and beyond
- This draft Strategic Research Agenda:
 - Sets out the problem and why European action is needed;
 - Summarises the methods used by TO-REACH
 - Identifies priority research areas;
 - Proposes a shared European approach to meeting these challenges
 - Taking an approach based on partnership and cooperation
 - Research targeting priority areas;
 - An information platform supporting mutual learning;
 - Capacity building;
 - Foresight and horizon scanning.
- Thanks to all partners and contributors to TO-REACH

Example: electronic process for transfusion safety

Transfusion safety at the bedside

The challenge

- European health systems have shared values and face shared challenges
 - Eg: rising burden of chronic conditions, population ageing, making best use of innovation in health and care, public expectations;
 - Distinguishing types of innovation: biomedical and technological innovation vs service and policy innovation
 - The complex character of health systems
- Shared European context
 - European support to medical and technological innovations
 - European legal, financial, policy and scientific context;
 - Common challenges and context provide potential for shared learning
- But we still face the challenge of understanding how a service and policy innovation in one setting can succeed elsewhere

Draft Strategic Research Agenda

- Aim: to provide an overall European strategy to advance our knowledge and understanding on the adoption, implementation and potential scale-up of service and policy innovations and their translation to other settings within and across countries.
- Methods:
 - Identified priority issues from national and international strategies, national consultations and an online consultation;
 - Reviewed existing literature;
 - Proposing strategic European research priorities

Overview

The process of transferring organisational innovation

Identify
innovations
with potential

Understand
characteristics
of
organisational
innovation

Understand
characteristics
of health
systems

Understand and
predict process
of transfer and
implementation

Substantive
priority areas
in health
services and
systems

Person-and population-centred health services and systems

Integration of services

Development and integration of long-term care services

Redefining hospitals

Strengthening primary health services

Improving mental health

The health workforce

Information and communication technology for health

Measuring and improving quality

Governance and financing

Methodological improvement

Putting the SRA into practice

- A shared approach to health services and systems research
 - Addressing common research challenges at European level
 - Building research capacity across Europe
 - Realising the potential of our collective investment in health
- Partnership and cooperation approach
 - Respecting national responsibilities for health services
 - Engaging all relevant stakeholders
- Looking to the future
 - Research targeting priority areas;
 - An information platform supporting mutual learning;
 - Capacity building;
 - Foresight and horizon scanning.

Summary

- Working towards a joint European research programme to support more effective and efficient health services in Europe and beyond
- This draft Strategic Research Agenda:
 - Sets out the problem and why European action is needed;
 - Summarises the methods used by TO-REACH;
 - Identifies priority research areas;
 - Proposes a shared European approach to meeting these challenges
 - Taking an approach based on partnership and cooperation
 - Research targeting priority areas;
 - An information platform supporting mutual learning;
 - Capacity building;
 - Foresight and horizon scanning.
- Look forward to your comments and discussion
